

WELCOME ON THE PAGES OF TYLL COMPANY

ABOUT COMPANY

Vyfuky Tyll company was founded in 1992. The original idea was response to the lack of spare parts for newly imported cars to Czechoslovakia after 1989. In 1995 the production expanded by producing exhaust parts for Skoda Favorit cars and gradually for all Skoda cars. Due to increasing production new spaces are built: production - administration building in the centre of Nebovidy with annual capacity of 350,000 pcs. (in 2000) and a new logistic centre with storage space for 20,000 pcs of exhaust pipes (in 2003). The company is presently modernising the machinery equipment.

Because of increasing demands for our products, we started to build a new modern hall sized 10,000 sq metres. The most important part of our sales and production are exhaust parts for Skoda cars, some exhaust parts for foreign cars, special exhaust parts for industrial machinery and exhaust parts for primary production.

The owner and general manager of the company is je Alexandr Tyll (born in 1961). He started his business in the garage of his house in Cervene Pecky in 1992. A year later he rented the vicarage building in a nearby village because of the capacity and space reasons and employed first employees for the production. As the production gradually increases, he hires more employees and he gets through almost all positions in his own firm up to his present function of a general manager, when he has over 100 employees. His hobbies besides the exhaust systems are the building trade and connected fields, which he also involved in his business: concrete production, ground and construction works, locksmithery, steel structures production and carpentry.

COMPANY POLICY

The main policy of the Tyll company is a production of quality goods while maintaining acceptable prices. Although the production, inventory and distribution costs are increasing, we try to maintain the existing quality and even to improve this quality. As a guarantee of operating company processes ISO 9001, ISO 14001, and VVT 046 standards were introduced, and these minimize all possible problems with relationship among suppliers, production, final customers and the environment. To improve all company processes and to expand the product portfolio of the Tyll company a new production hall is being built at present. Due to it the company will be able to respond to demands from the automotive field or other industries. To be able to supply the basic industry directly, the company is ready to introduce the appropriate standards.
